

Now 3 Technical Achievement Awards for cinema projection lens series manufactured by ISCO-OPTIC.

Anamorphotische Vorsätze

Die anamorphotischen Hochleistungsobjektive für 3-chip DLP™ Projektoren sind eine Gemeinschaftsentwicklung von Texas Instruments und ISCO-OPTIC.

Als anamorphotische Vorsätze zu Projektoren verschiedener Hersteller ermöglichen sie die Projektion von 16:9 HDTV, Widescreen 1:1,85 oder Cinemascope 1:2,35 Formaten.

Diese Anamorphote bestehen aus einem 5-linsigen System in 3 optischen Gruppen. Das Gewicht beträgt ca. 5 kg.

Bereits 1999 hatte das *Digitale Kino* Premiere. So startete der neue *Star Wars: Episode I - The Phantom Menace* Film digital in einigen Kinos in den USA, bevor er in den klassischen Multiplexen anlief.

Heute eine neue Technologie - morgen der Standard!

Anamorphic Attachments

These high-quality anamorphic attachment lenses for 3-chip DLP™ projectors have been designed in cooperation with Texas Instruments and can be used in nearly all projector brands. Four different anamorphic lenses are available which project the following formats: 16:9 HDTV, Widescreen 1:1.85 or Cinemascope 1:2.35.

Consisting of a 5-element lens system in 3 optical groups, each anamorphic lens weighs about 11 lb.

Already in 1999 the digital cinema was born! The new movie *Star Wars: Episode I - The Phantom Menace* was being projected digitally in some theatres before it was introduced to the „classical multiplex theatres“.

Today a new technology - tomorrow the standard!
